Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Strassel.

The patent to Strassel discloses the recited resin coated steel pipe comprising a steel thin walled corrugated pipe 2, a layer 8 formed of an elastomer which acts as an adhesive layer for the remaining layers, an addition plastic layer can then optionally be provided above the elastomer layer, and an alloy resin material 9 is placed over the top of all layers and is formed of a material that is a mix of a crystalline material with a styrene based resin, such as using PBT or polyamide resins in an ABS material, where inherently the adding of such materials as PBT can give the material the ability to slide, where the pipe structure is uniform and is provided with corrugations that are spiral and therefore contain a component in the axial direction thereby extending in the axial direction around the circumference of the pipe, where the corrugations form ridges and furrows, and as shown in figures 4 and 6, the alloy material of layer 9 can extend into the grooves, which is spline shaped based upon the definition of spline being a thin metal strip of which Strassel is formed (see Websters 10th Edition Collegiate Dictionary).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patents to Kahn, Yoshino, Reynolds, Deroch, Lorek, Katayama, Sorkin, and Sato disclosing state of the art coated pipes and plastic alloys used for pipes.
